# Resource Management

**Resource Management** is a web-based solution to optimize manpower utilization and monitor manpower availability.

## Salient Features

Automated Work Allocation

- Real Time Resource Usage View
- Skill-set wise Manpower Availability
- Team Build View
- Drag and Drop feature for task Assignments to resources based on their availability and skill
- Notification to Resources on their Work Allocation
- Basic Metrics like resource efficiency, resource utilization, planned vs. actual etc.

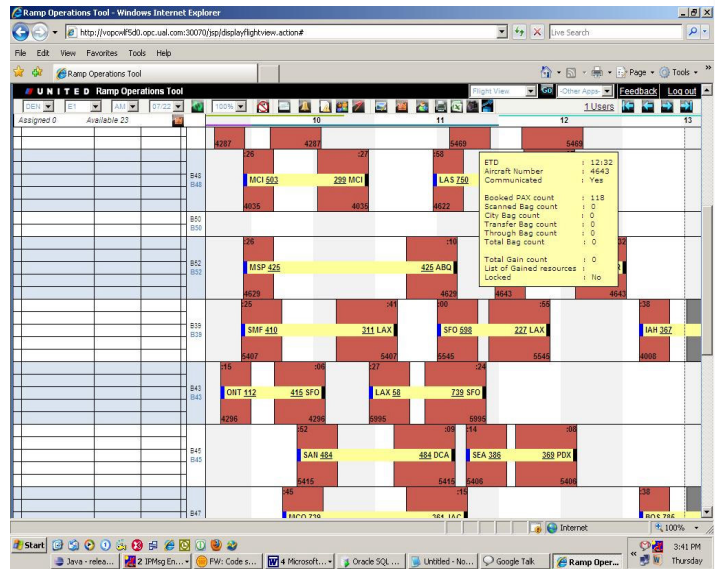

**Real-time Work Package:** generates automated work packages for scheduled activities and manual work packages for unplanned activities. It helps to identify uncovered work packages and opportunity to cover idle time between two work packages

**Manpower Availability:** displays the list of available manpower based on skill sets, shifts and color coding

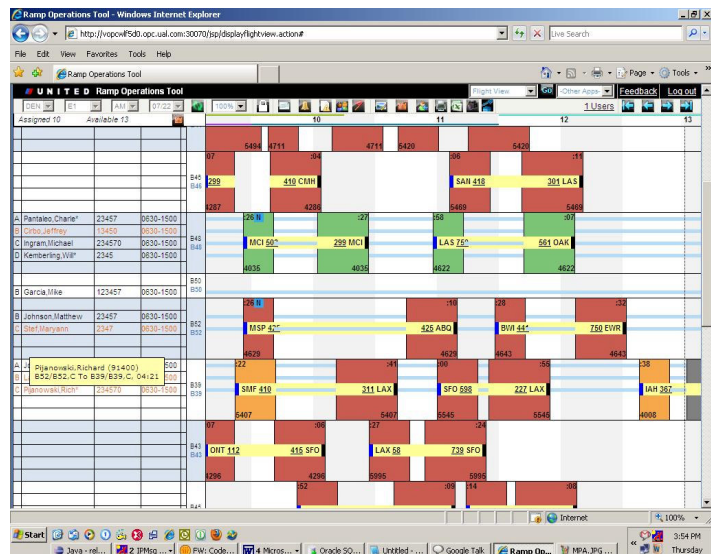

**Team Building:** generates team lists based on work package requirements, based on constraints of resources skills and availability.

**Resource Movement:** allows a drag and drop feature to move the entire team to address a particular work package. It performs constraints checks on skill-sets and provides options for forced resource movements

**Reporting:** Some of the common reports generated are – manpower utilization, overtime and late lunch tracking, resource load, idle time evaluation

Real-time Work Package Information

Team Building
